

You're entering a green world.

... But it's not just our plants that make us green.

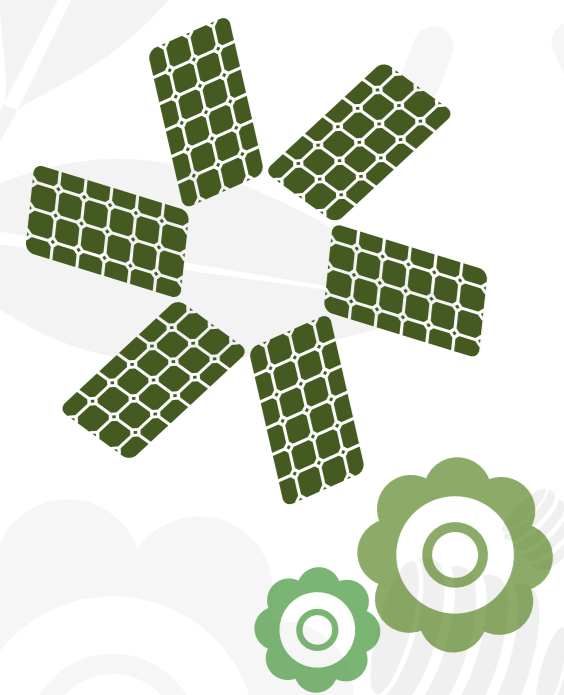

As you visit Nursery Traders today you'll discover our bountiful greenlife is matched by our commitment to a greener life for us all.

Below your feet our network of drains captures both run-off and stormwater, joined by guttering and drainage systems that feed this precious water through our sand filters and into our massive tank farm.

Supported by our onsite weather station, this system allows us to irrigate our nursery using little to no potable water—annually saving enough water for around 1300 people.

Above your head, 228 solar panels generate more than 187 kilowatt-hours each day, powering our nursery wholly on renewable energy. In fact, we sell excess green power into Queensland's grid—minimising our energy use through natural light and smart consumption.

As you walk the site, you'll see our recycling centres—separating green waste; solid fill; and comingled paper, cardboard, plastics and glass. We compost food scraps and reuse other waste resources—cardboard packing boxes, plant sleeves for shipping, steel for displays and fencing ...

And then there are the sustainable practices—paperless operating systems, business innovations and efficiency thinking that have set us apart since 1993.

So when you step into our green-world today, please do your bit to make Nursery Traders a zero footprint business.

Welcome to the green gateway.
